Meteomatics:

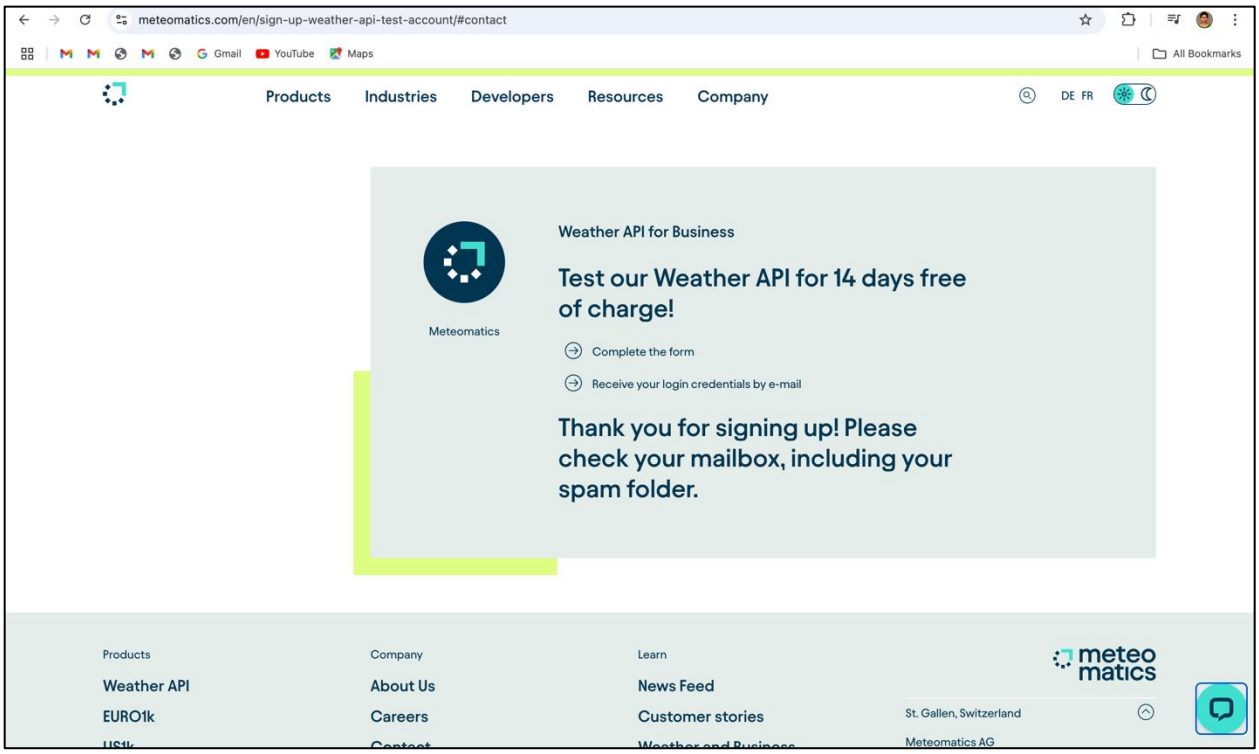

Step 1: Log in to the link: https://www.meteomatics.com/en/sign-up-weather-api-test-account/

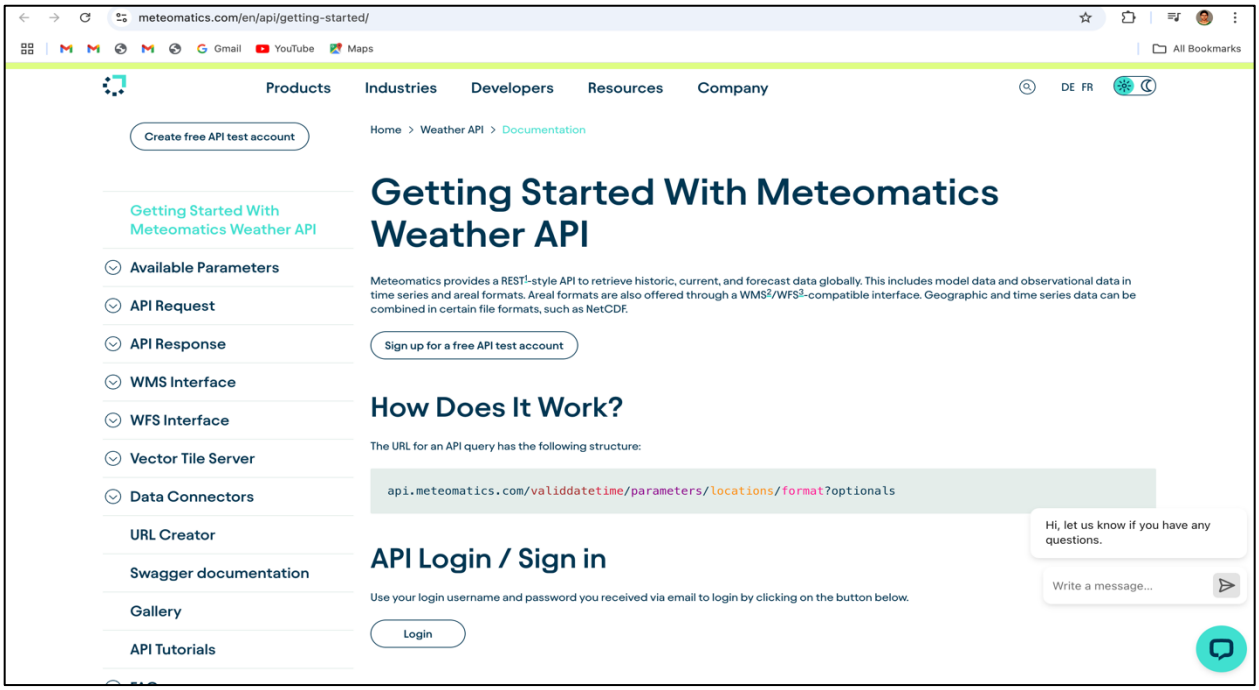

Step 2: Click on “Start a free API trial”

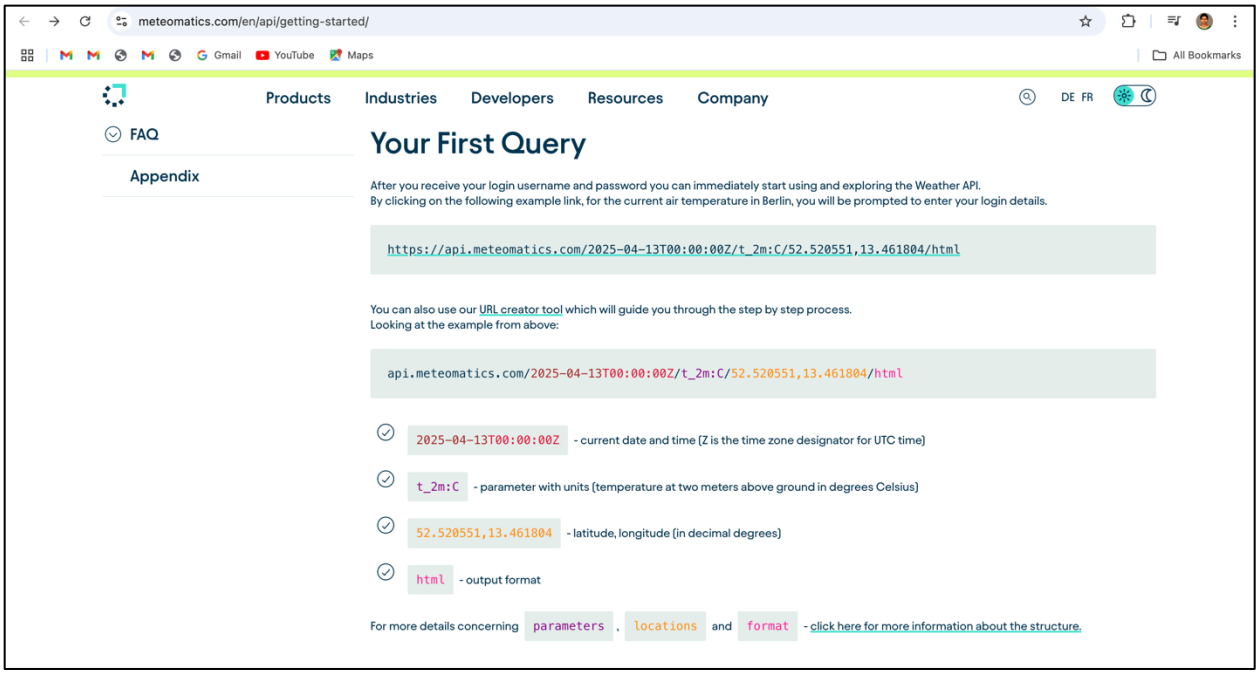

Step 3: Create an account with a 14-day trial

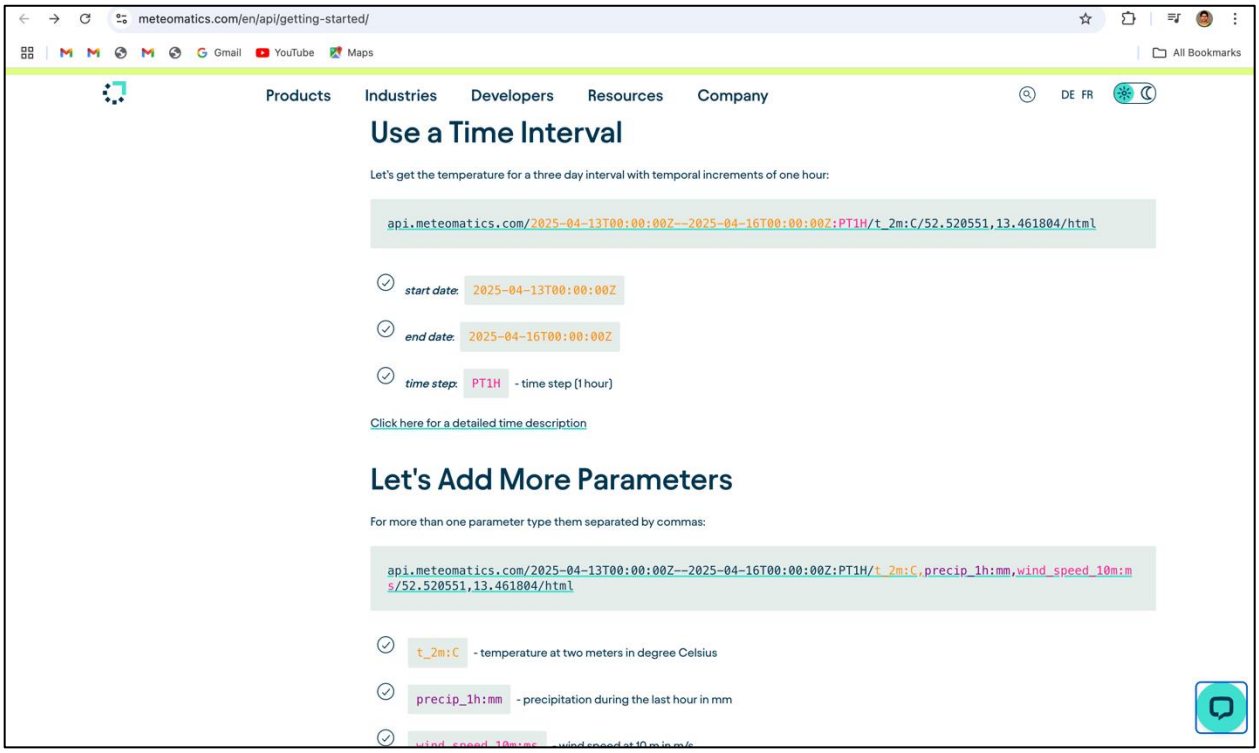

Step 4: After creating the account, log into the page to understand how the Meteomatics API works

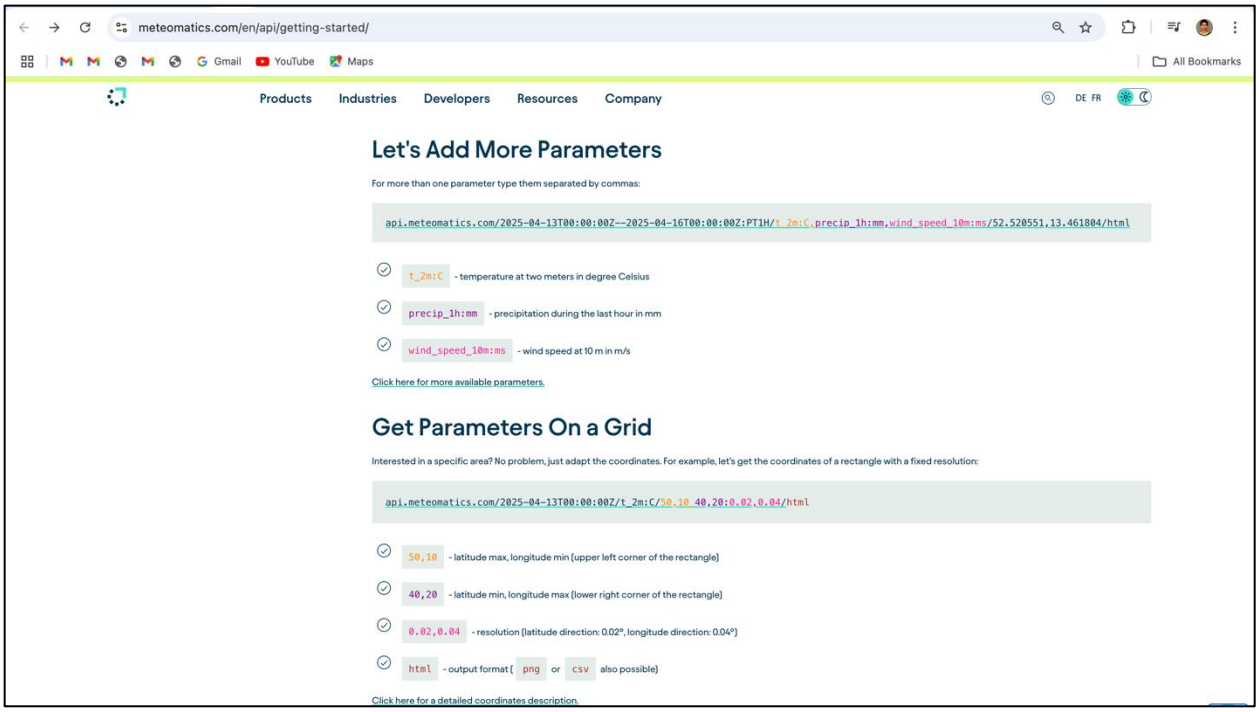

Step 5: Checking for sample queries in the documentation

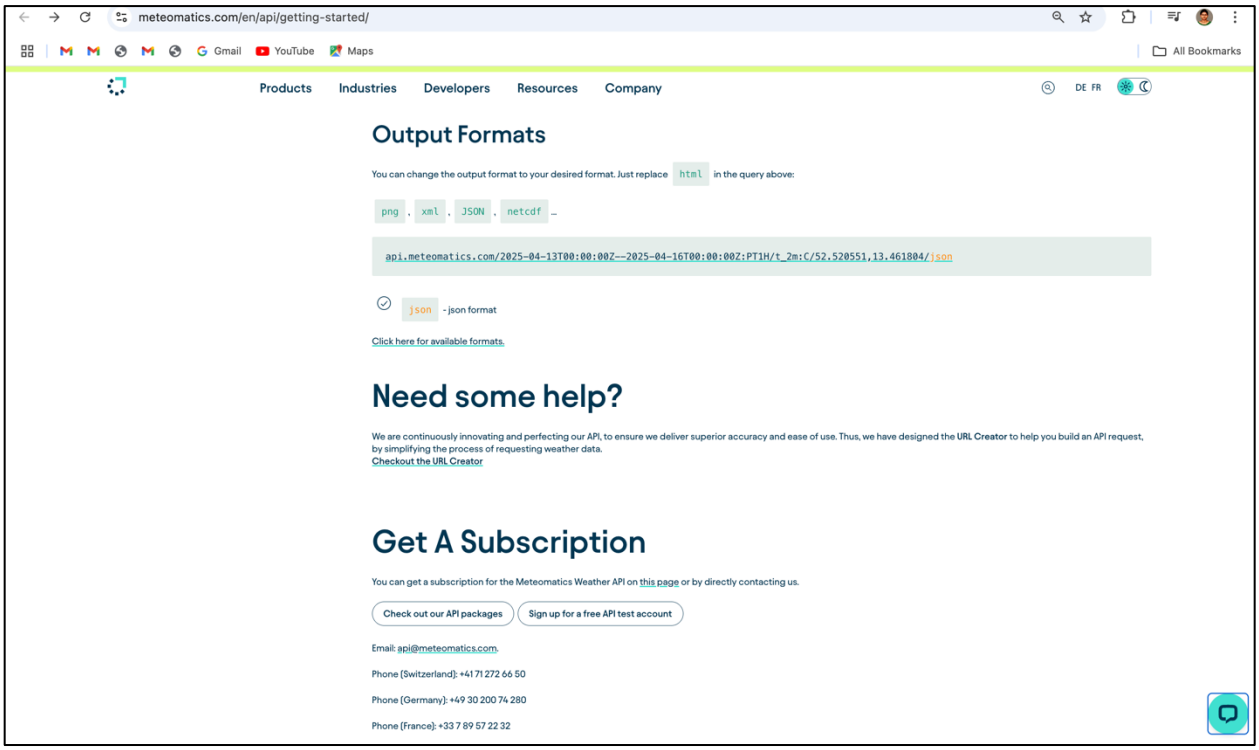

Setting the time interval query parameters as per documentation

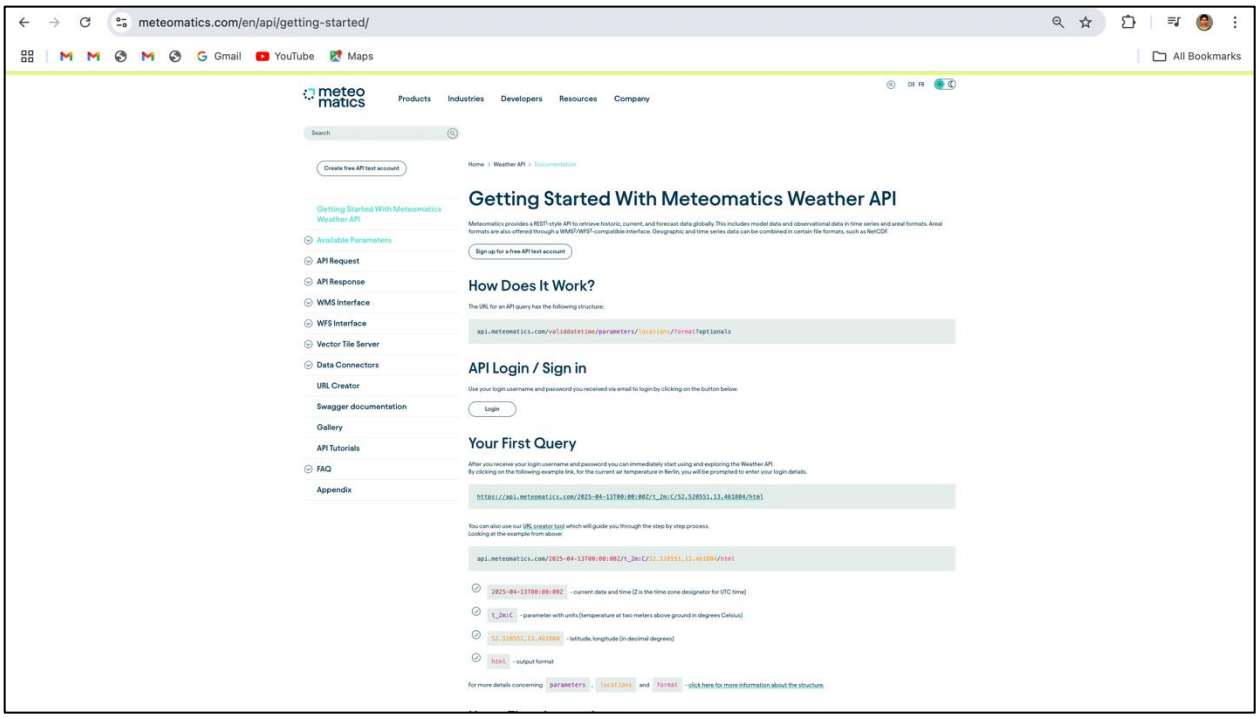

Adding more parameters on the grid like latitude, longitude

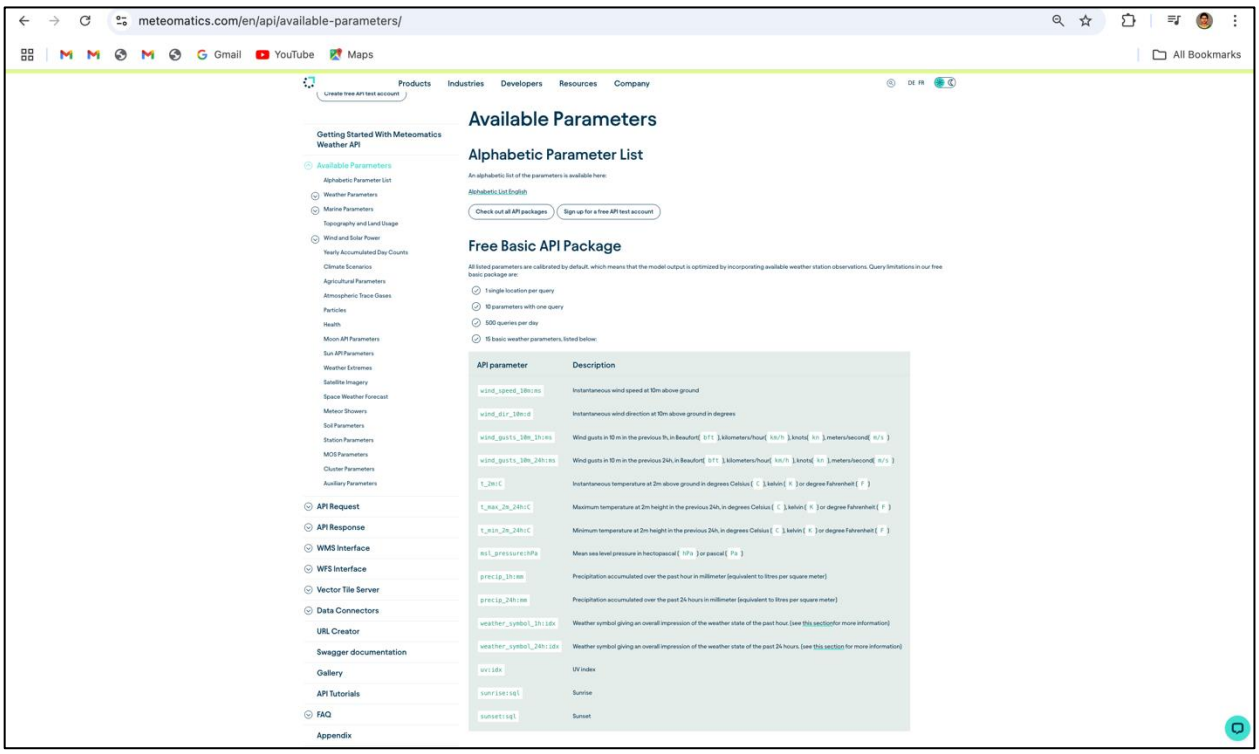

Output formats to explore like XML, JSON, PNG.

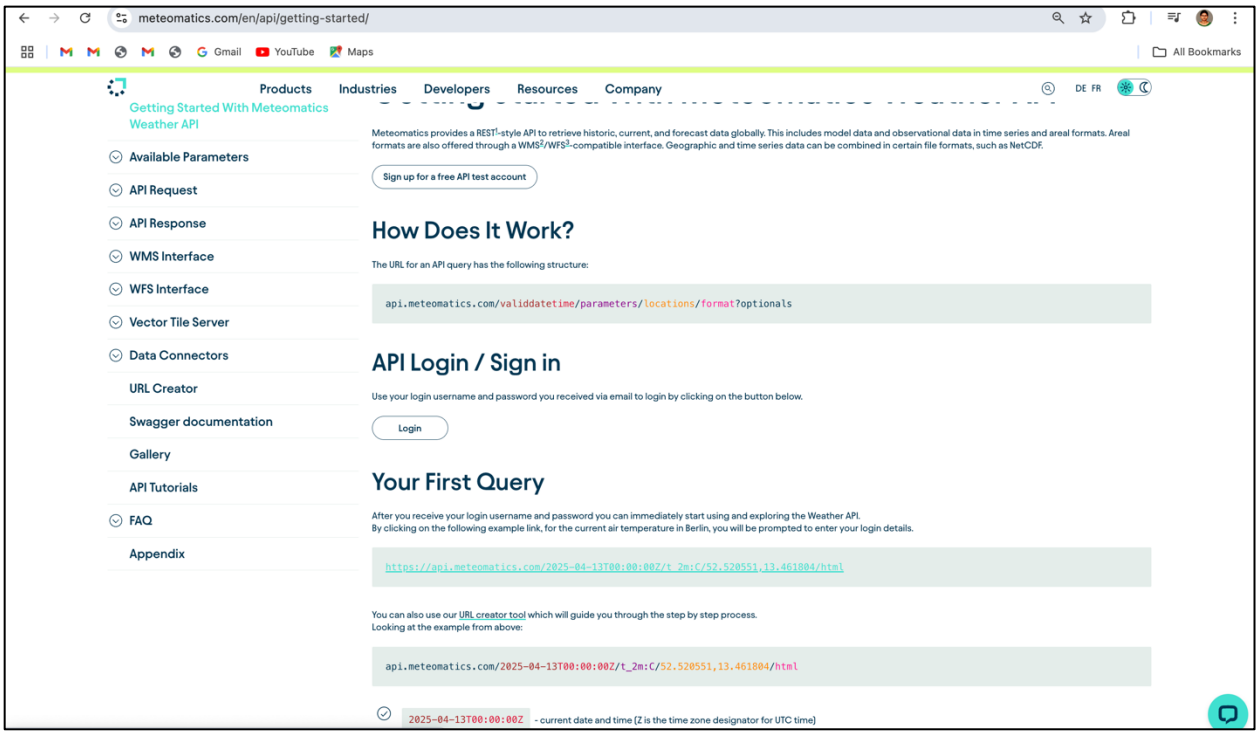

Step 6: Now, navigate to available parameters

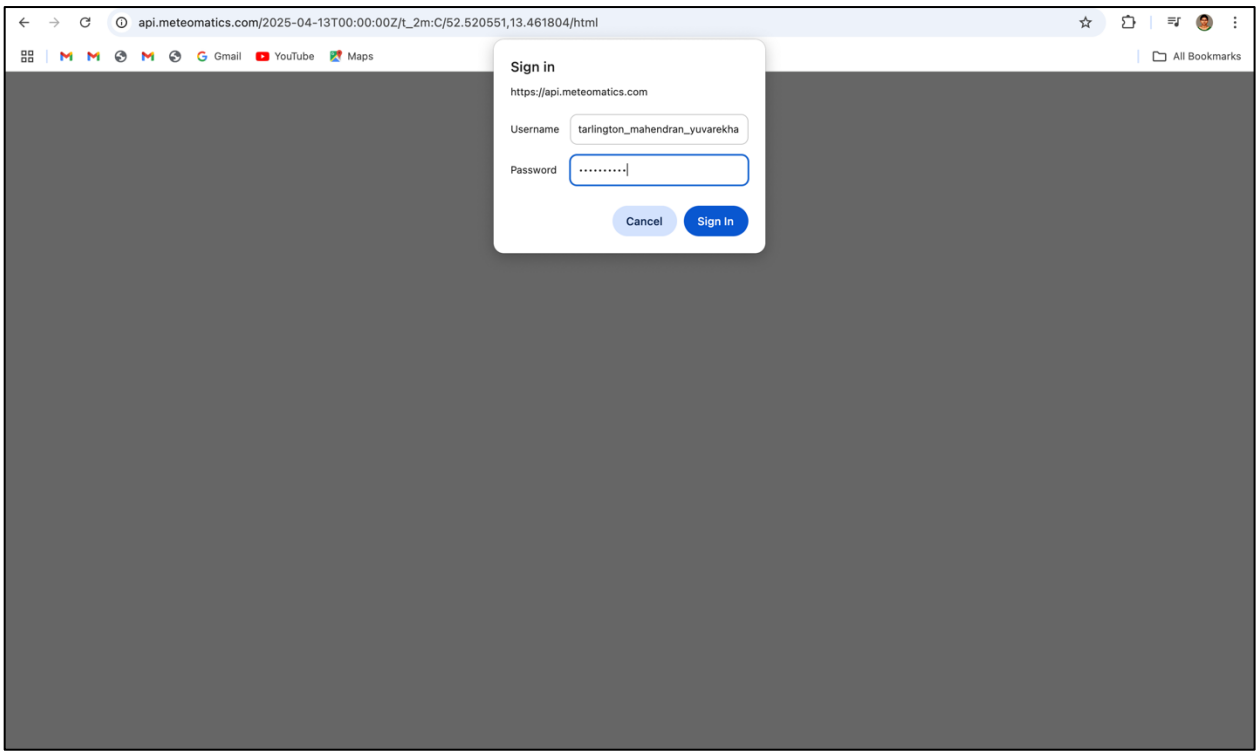

Step 7: Explore the available parameters in order to proceed to API Query

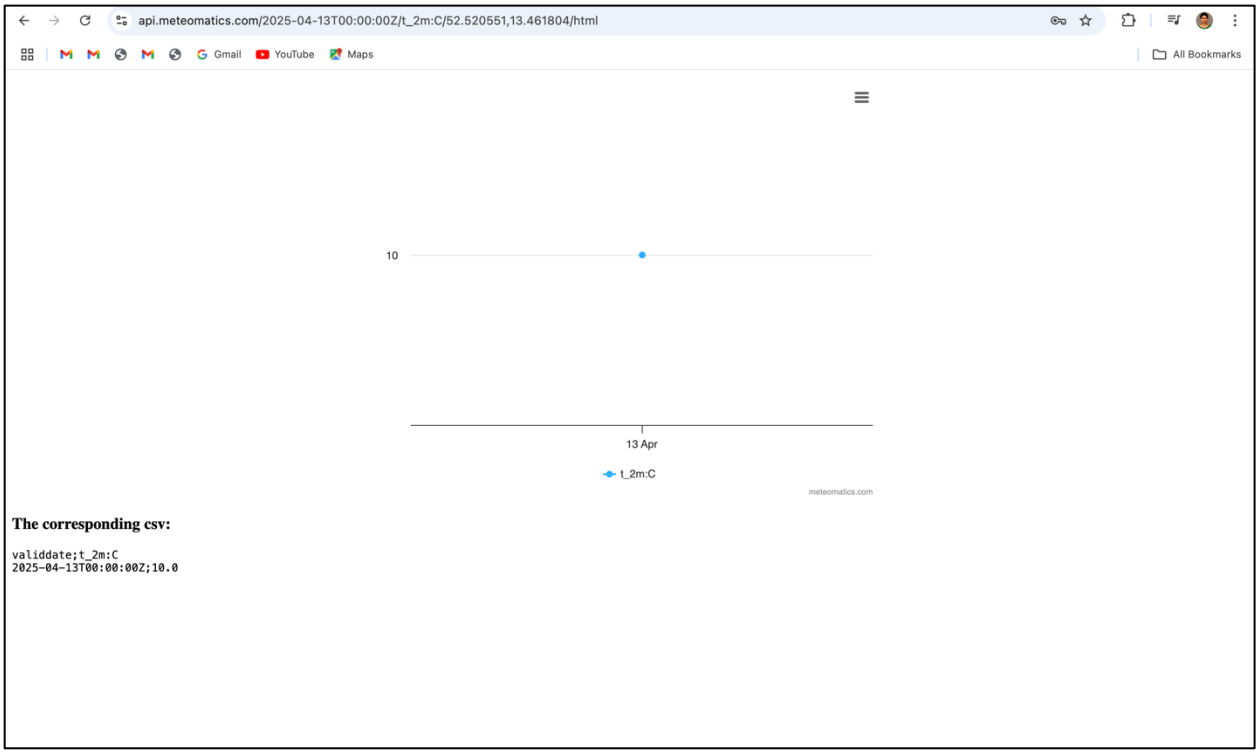

Step 8: Click on “Your First Query” to start

Step 9: Since we are logging in for the first time, it will prompt us for a username and password for the first query

Step 10: After entering credentials, we will enter this page

The corresponding csv:

```
validdate;t_2m:C
2025-04-13T00:00:00Z;10.0
```

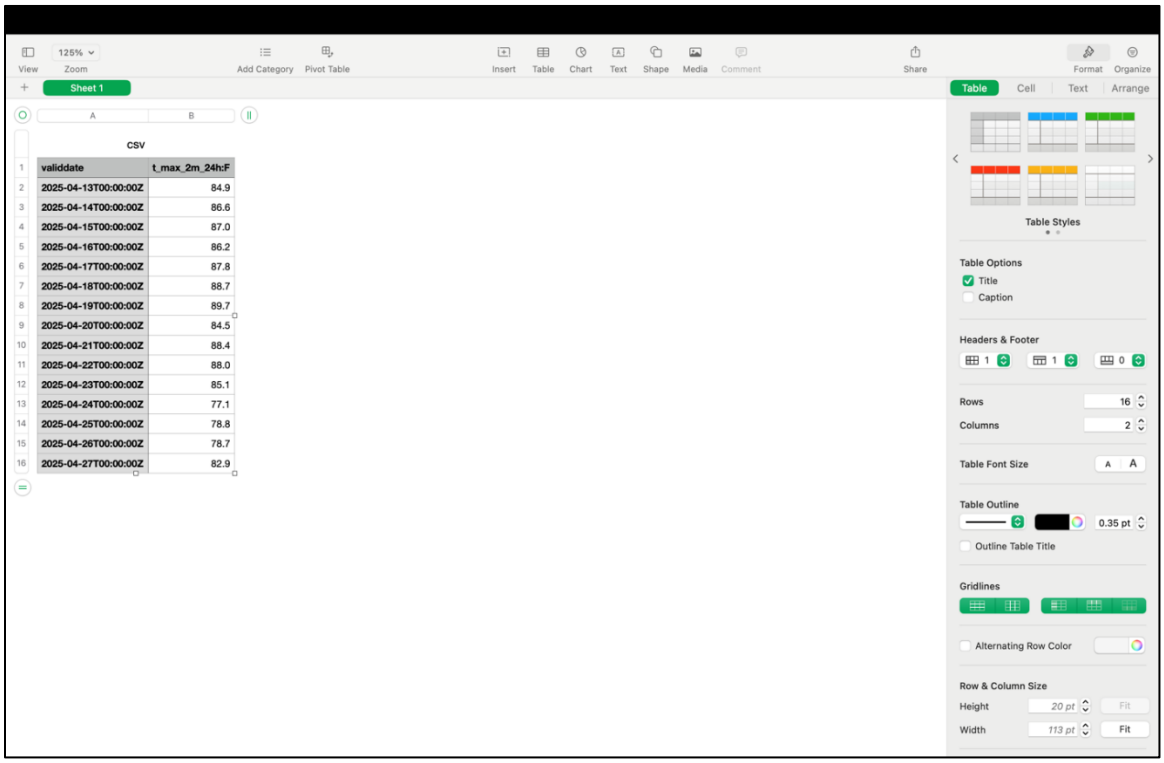

Step 11: Check the max temperature for the next 14 days for 24 hours with this API Query at latitude=30.1591, longitude=-96.3972 for Brenham, TX USA

The corresponding csv:

```
validdate;t_max_2m_24h:F
2025-04-13T00:00:00Z;84.9
2025-04-14T00:00:00Z;86.6
2025-04-15T00:00:00Z;88.0
2025-04-16T00:00:00Z;86.2
2025-04-17T00:00:00Z;87.8
2025-04-18T00:00:00Z;88.7
2025-04-19T00:00:00Z;89.7
2025-04-20T00:00:00Z;84.5
2025-04-21T00:00:00Z;88.4
2025-04-22T00:00:00Z;88.0
2025-04-23T00:00:00Z;85.1
2025-04-24T00:00:00Z;77.1
```

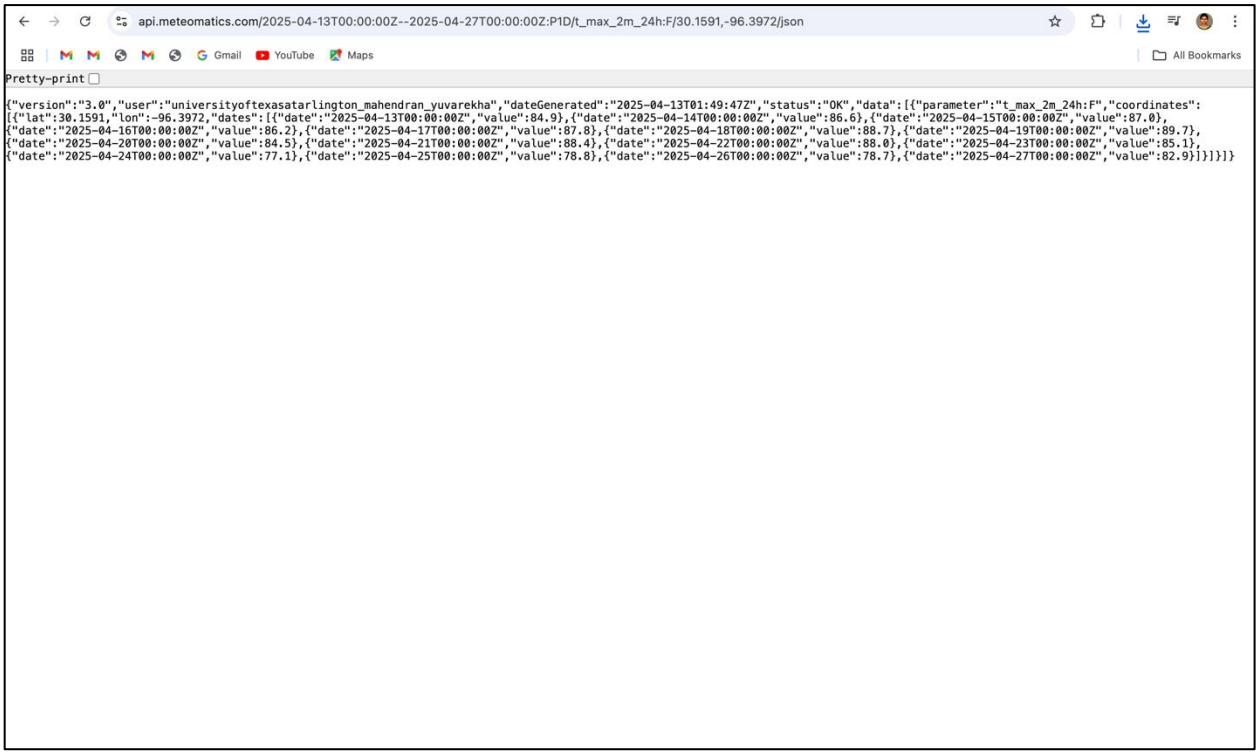

Checking in CSV format to see the temperature for next 14 days

CSV

validdate	t_max_2m_24h:F
2025-04-13T00:00:00Z	84.9
2025-04-14T00:00:00Z	86.6
2025-04-15T00:00:00Z	87.0
2025-04-16T00:00:00Z	86.2
2025-04-17T00:00:00Z	87.8
2025-04-18T00:00:00Z	88.7
2025-04-19T00:00:00Z	89.7
2025-04-20T00:00:00Z	84.5
2025-04-21T00:00:00Z	88.4
2025-04-22T00:00:00Z	88.0
2025-04-23T00:00:00Z	85.1
2025-04-24T00:00:00Z	77.1
2025-04-25T00:00:00Z	78.8
2025-04-26T00:00:00Z	78.7
2025-04-27T00:00:00Z	82.9

Checking it in JSON format

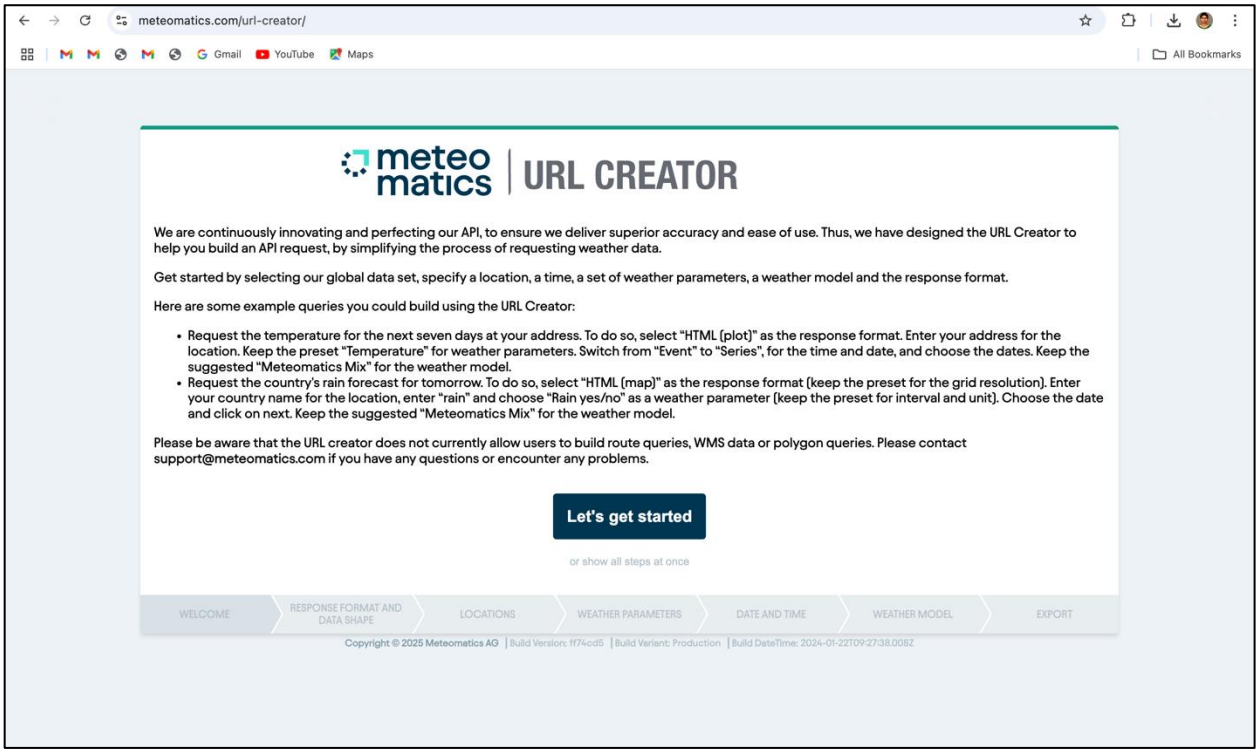

api.meteomatics.com/2025-04-13T00:00:00Z--2025-04-27T00:00:00Z:P1D/t_max_2m_24h:F/30.1591,-96.3972/json

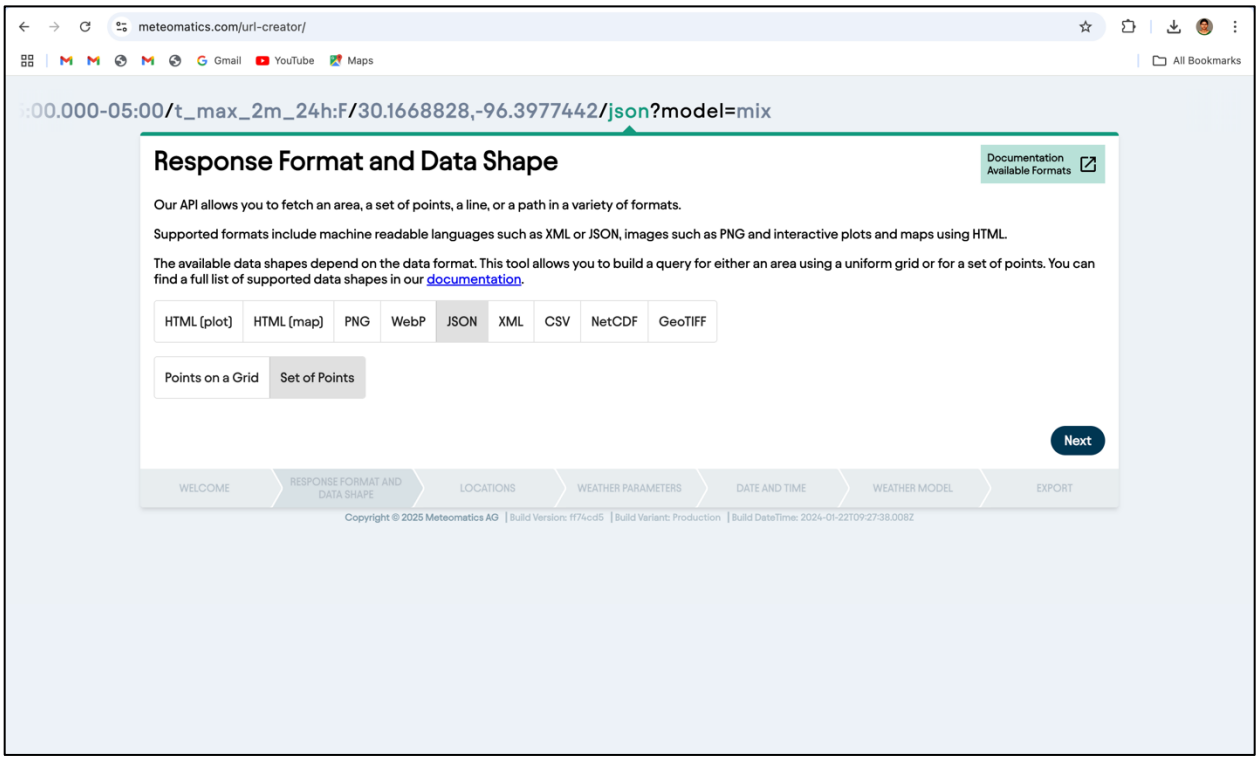

Pretty-print

{"version":"3.0","user":"universityoftexasatarlington_mahendran_yuvarekha","dateGenerated":"2025-04-13T01:49:47Z","status":"OK","data":[{"parameter":"t_max_2m_24h:F","coordinates":

Step 12: Check with the “URL Creator” simultaneously to confirm the location as another method to get the output as in Step 11

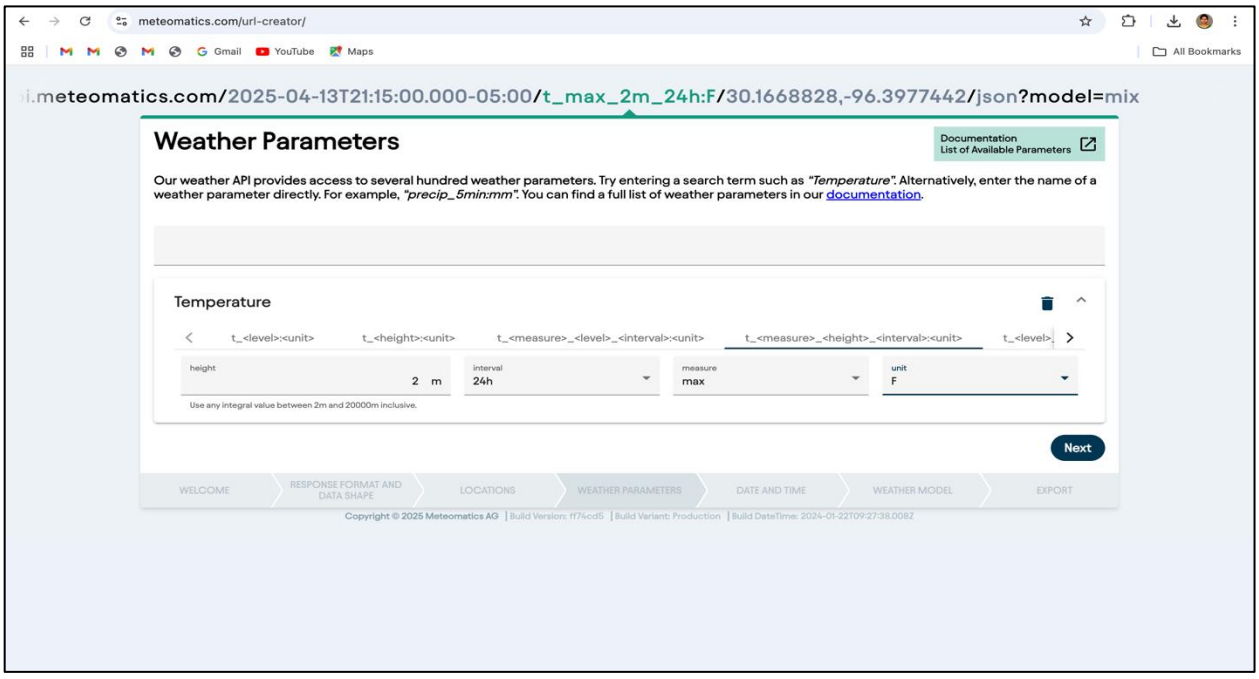

Step 13: Give the grid resolution and proceed to the next step

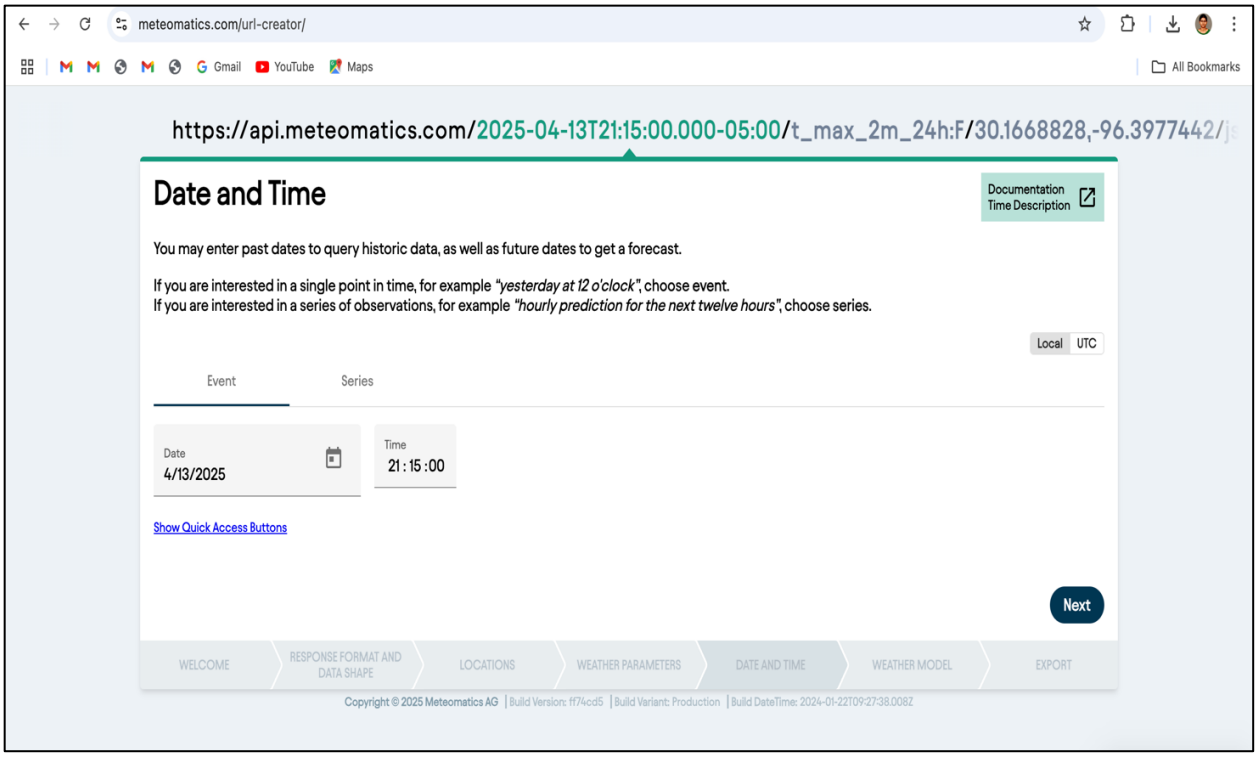

Step 14: Confirm the location as Brenham, TX after latitude, longitude is fed

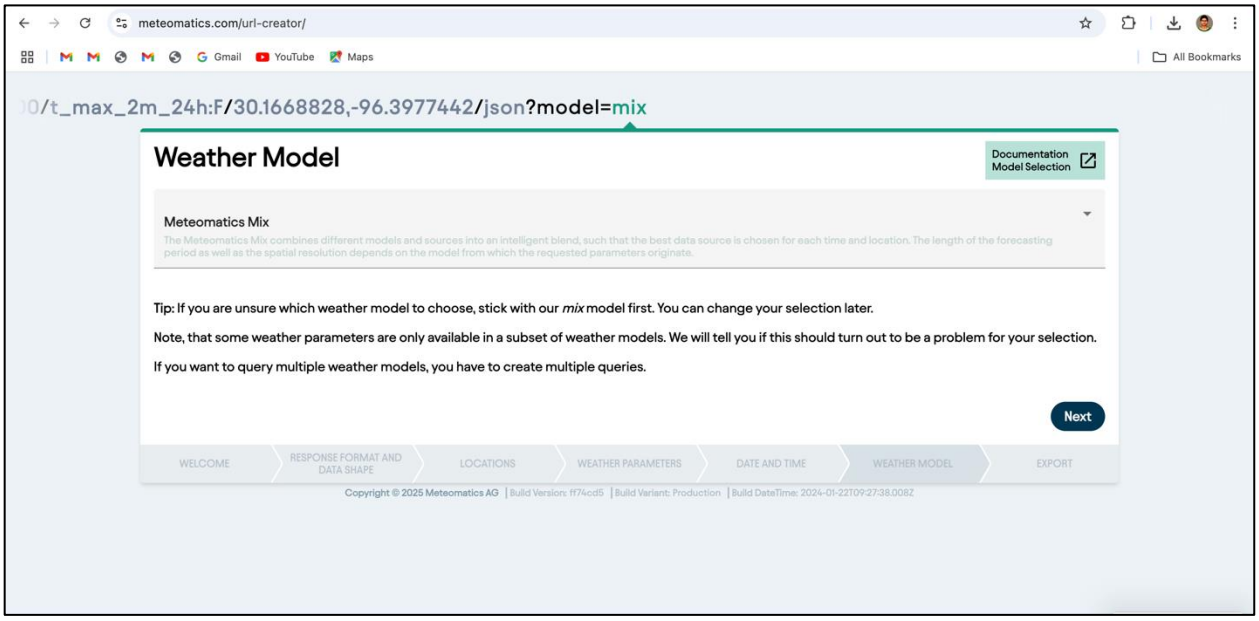

Step 15: Set the weather parameters, such as height as 2m, interval as 24h, and max temperature with units.

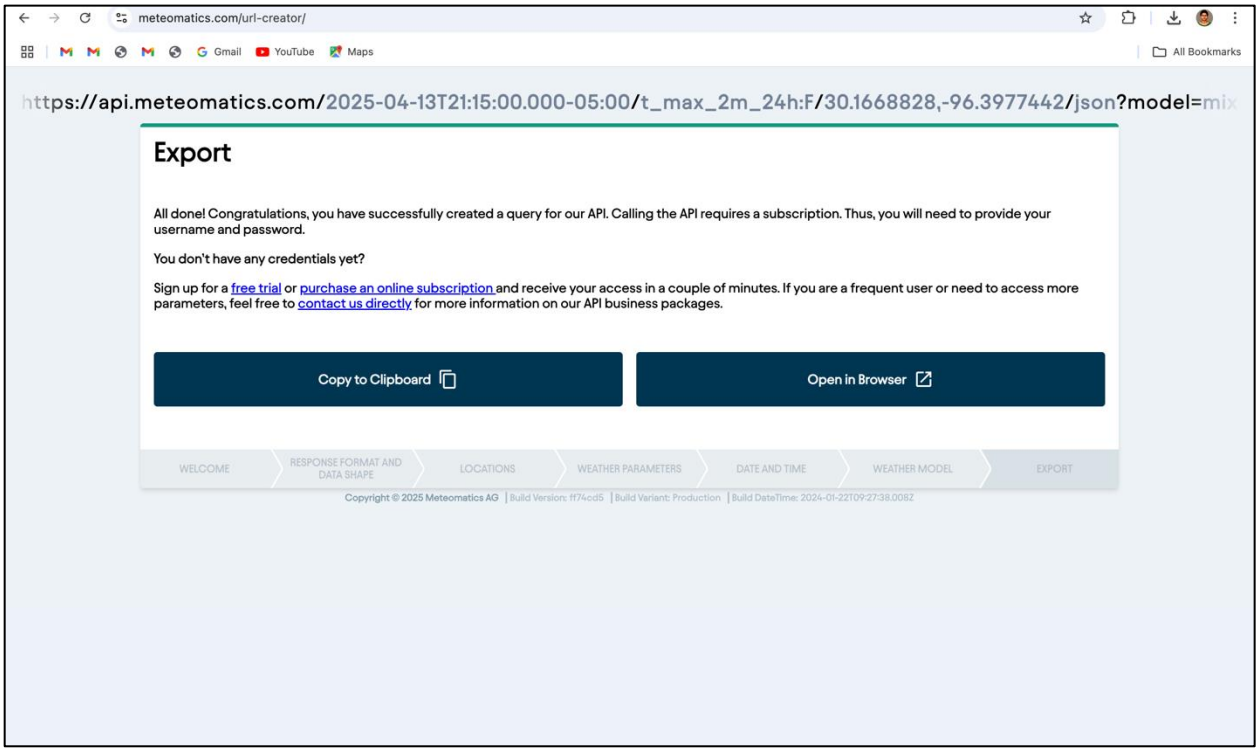

Step 16: Set the weather parameters such as Date and Time from current date.

Step 17: Set the weather parameter to the Meteomatics model and click 'Next'

Step 18: URL is created and click “Open in Browser” to view

Step 19: View the URL contents in JSON format, as in Step 11
